## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to network monitoring, classified in class 709, subclass 224.
- II. Claims 26 and 27, drawn to updating network status, classified in class 710, subclass 19.

Inventions I and II are related as subcombinations as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility, such as the monitoring and managing of a network, which may be implemented separately from the other invention. Invention II implements the reporting of resource properties that have changed, which constitutes an updating of information, classified in class 710, subclass 19. This teaching may also be implemented separately from the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
